EDUCATION

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
B.Tech,CSE-AIML	SRM Institute of Science and Technology, Chennai	9.48	June,2025
12th	Narayana Junior College / BIEAP	96.6	May,2021
10th	Sri Krishnaveni E.M High School / BSEAP	10	May, 2019

SKILLS

- **Programming Languages**: Python, SQL
- **Technologies**: Agentic AI, Generative AI, Machine Learning, Deep Learning, NLP, Computer Vision, Diffusion Models, Vector Databases (VectorDB), Data Analysis
- **Frameworks**: LangChain, LangGraph, CrewAI, AutoGen, LlamaIndex, FastAPI, React
- **Tools/Databases**: Google Cloud Platform (GCP), BigQuery, OpenAI API, MySQL, Git, VS Code, Power BI, Tableau, Jupyter Notebooks

EXPERIENCE

- **SYNAPT AI** May 2026 – Present
Forward Deployed Engineer Chennai, India
 - Bridge the gap between RD and Production by architecting custom Agentic AI loops and FastAPI-based microservices, reducing the transition cycle from research prototype to client-integrated system.
 - Embed within enterprise client ecosystems to engineer autonomous automation pipelines and intelligent agents, directly solving "Shadow Data" challenges and accelerating real-time decision-making cycles.
 - Develop bespoke API orchestration layers and modular Graph-RAG architectures, ensuring seamless interoperability between Synapt's core AI platform and fragmented legacy enterprise infrastructures.
 - Lead technical solutioning in high-pressure environments, converting complex customer requirements into scalable, production-ready code while maintaining a direct feedback loop to the internal product team.
- **PRODAPT** July 2025 - Present
Software Engineer I Chennai, India
 - Led AI-driven pre-sales solutioning by converting research prototypes into production-ready systems using FastAPI and Agentic AI frameworks, reducing solution development time by 30%.
 - Built scalable automation pipelines and intelligent agents to streamline enterprise workflows, improving operational efficiency and accelerating decision-making cycles.
 - Collaborated cross-functionally with solution architects and stakeholders to design scalable AI-powered enterprise solutions aligned with client business objectives and delivery timelines.
- **COGNIZANT TECHNOLOGY SOLUTIONS** May 2025 - July 2025
GCP Associate Pune, India
 - Designed and deployed real-time data pipelines on GCP (Dataflow, Cloud Storage, BigQuery) to process high-velocity IoT data streams, handling large-scale ingestion with low-latency (<5s) processing.
 - Optimized data transformation workflows, improving query performance and reducing processing costs by 20%.
 - Implemented cloud-based monitoring and logging solutions using GCP services to ensure pipeline reliability, fault tolerance, and real-time performance tracking.
- **PANTECH SOLUTIONS** Jan 2024 - Mar 2024
ML & Data Engineer Trainee Chennai, India
 - Developed and deployed ML models for predictive analytics across multiple use cases, improving model accuracy and enabling automated decision workflows.
 - Created interactive dashboards using Power BI and Tableau, enhancing data visibility and supporting stakeholder decision-making through actionable insights.
 - Performed end-to-end data preprocessing, feature engineering, and model evaluation to improve predictive performance and ensure data quality consistency.
- **ENDURO** Oct 2022 - Dec 2022
Software Developer Trainee Remote
 - Delivered user-centric software features aligned with business requirements, ensuring timely releases and improved user experience.
 - Diagnosed and resolved development bottlenecks, increasing team productivity and demonstrating rapid adaptability to new technologies.
 - Contributed to application testing, debugging, and performance optimization, improving software stability and reducing issue resolution turnaround time.

PROJECTS

- **TestPilot — AI-Powered Test Generation Platform**

Techstack : Python, FastAPI, LangGraph, LangChain, AzureOpenAIGPT – 4, FAISS, React

- Built an enterprise QA automation platform that converts Jira tickets and requirement documents into structured test scenarios and cases using agentic AI, reducing manual test design effort by 60% and improving test coverage.
- Designed a dual-agent architecture (ScenarioGraph, TestCaseGraph) leveraging vector search (FAISS) and LLM orchestration to generate high-quality happy, edge, and failure test cases with validation and retry mechanisms.
- Automated Jira integration to create Stories and Sub-tasks linked to Epics, and developed a React dashboard with real-time (SSE) bulk generation and multi-format export, enhancing QA workflow efficiency.

- **CodeMorph — Legacy Codebase Modernization Platform**

Techstack : Python, FastAPI, LangGraph, AzureOpenAIGPT – 4, FAISS, React, TypeScript

- Engineered a full-stack agentic platform to modernize legacy codebases via a 7-stage transformation pipeline, reducing manual refactoring effort by 50% and accelerating migration timelines.
- Orchestrated 10+ AI agents using LangGraph (StateGraph) for context analysis, API conversion, database mapping, and behavioral validation, ensuring scalable and accurate code transformation.
- Implemented confidence scoring with human-in-the-loop review and generated downloadable modernized code artifacts and validation reports through an interactive React dashboard.

- **RCA Smart Debugger — AI-Powered Root Cause Analysis Platform**

Techstack : Python, FastAPI, AzureOpenAIGPT – 4, FAISS, tree – sitter, React

- Developed an AI-driven RCA platform that analyzes GitHub issues and multi-language codebases using AST parsing and semantic embeddings, reducing debugging time by 40% and improving issue resolution speed.
- Built automated ingestion pipelines triggered via GitHub webhooks, maintaining real-time vector indices for contextual issue analysis and scalable system performance.
- Delivered GPT-4-powered root cause reports with impacted components, logic gaps, and resolution recommendations, visualized through an interactive React dashboard with filtering and insights.

CERTIFICATIONS

- Oracle Certified in AI Foundations
- Oracle Certified in Generative AI
- Oracle Certified in AI Vector Search
- Oracle Certified in Data Science

ACHIEVEMENTS

- SRM Merit Scholarship Holder
- Winner in SRM TECHNO Hackthon organized by SRM-KTR
- Finalist in HashBreaker 2.0 organized by VIT-AP
- Finalist in Layer 2.0 organized by SRM-KTR

PUBLICATIONS

- [GAN-Powered Image Steganography](#)
- [Deep Faked based Text to Image Synthesis for Criminal Face Generation](#)
- [Object Detection and Distance Calculation for Visually Impaired Persons](#)
